Spirito by enartis

TECHNICAL SHEET

YEAST

SpiritoSpeed PVY

Saccharomyces cerevisiae

DESCRIPTION

SpiritoSpeed PVY is a robust and highly reliable yeast developed for secure and efficient fermentations across a wide range of distilled spirit applications. Its rapid fermentation kinetics, short lag phase, and low nutritional requirements ensure complete sugar depletion even under challenging conditions, making it particularly suitable for high-volume productions and facilities with limited process control. Thanks to its strong fermentative performance and ability to outcompete indigenous microflora, SpiritoSpeed PVY promotes clean, consistent, and trouble-free fermentations.
With a neutral sensory profile, SpiritoSpeed PVY preserves and enhances the authentic character of the raw material boosting the fruitiness aroma, while minimizing the formation of undesirable fermentation by-products. It is especially recommended for the production of fruit spirits, brandies, grape distillates, and both cane juice and molasses-based rums. Its excellent adaptability and alcohol tolerance of up to 15% v/v and it's thermotolerance provide reliability and versatility throughout the fermentation process.

DOSAGE

20-100 g/hL (0,75-3,8 g/gal)

PACKAGING & STORAGE

10 kg
Sealed package: store in a cool (preferably 5-15°C or 41-59°F) and dry area.
Opened package: carefully reseal and store as indicated above; use quickly.

COMPLIANCE

This product may be subject to regulatory restrictions in certain jurisdictions and may vary by country. The user is responsible for determining and ensuring compliance with all applicable laws and regulations and must verify local applicability.

The indications given here correspond to the current state of our knowledge and experience, however they do not relieve the user from compliance with safety and protection regulations or from improper use of the product.
